PROVIDING A COMPETITIVE EDGE FOR MANUFACTURERS ACROSS THE WORLD

For almost 30 years, CKF has successfully supported manufacturing to stay competitive and improve long term sustainability. Businesses turn to CKF to achieve growth, by increasing output, reducing operating costs and improving product quality.

CKF established its reputation as a leading solutions provider within food manufacture and processing. Today, the company has successfully transferred its skills to many other business sectors, delivering a host of benefits in a wide variety of applications.

Long term alliances

The company is proud of its long term alliances with customers and the work it undertakes on behalf of some of the world's leading brands. This is made possible by continually delivering results and providing clients with the peace of mind that, from concept to commissioning and beyond, the CKF engineering team will deliver on budget and on time.

Collective brain power and a practical approach

To every challenge, CKF applies collective brain power and a practical approach. We make it our business to know your business; to dig below the surface so that we can prescribe the very best solution. Our 40-strong engineering team is supported by a factory acceptance trial facility at our Gloucestershire premises, where new systems are pre-tested for accuracy and precision.

At the forefront of robotic technologies

CKF offers independence, expertise and experience and is as comfortable working with start-ups as multinationals. The company maintains its position at the forefront of robotic technologies by investing in the best available design, electrical and mechanical engineering talent.

A reputation for excellence

CKF has an established reputation for both engineering excellence and superior customer service on a worldwide scale. Our clients know that along with a practical approach and industry-leading experience, our focused team brings creativity, passion and integrity to every challenge.

Independent and flexible

CKF has provided its customers with independent expertise and a flexible approach, designed to secure the best possible solution from any challenge. It's why companies come back to us time and time, again.

Invest to achieve

We place great importance on investment in facilities and people. Our commitment to engineering excellence by recruiting and developing the best available talent is ongoing. Achieving success requires a resourceful, capable and motivated team, prepared to listen, ready to deliver and encouraged always to challenge the norm.

Integrity and accountability

Integrity and accountability are fundamental to our business. We believe in doing what we say we are going to do at every stage of a project and recognise that how we do it is as important as what we do.

Collaboration

Our approach is always collaborative, whether working alongside our clients or in-house. We know that working closely as a team always produces better results.

Sense of humour and perspective

We make sure we take our work seriously but never ourselves. Amidst the pressure of hard work, a sense of humour and perspective is never far away.

Positive and pragmatic

We take great pride in our positive approach to work, balanced with realism and honesty. We seek always to over-deliver on our commitments to our customer.
